

A Proven Partner for Health Plans

Improve Outcomes and Reduce Costs with Palliative Care

Vynca is a healthcare software and services company delivering comprehensive outpatient palliative care to adults and pediatric patients. Over the past decade, we've improved the lives of more than 15,000 patients by providing high-quality care. We help seriously ill patients feel better, honor their care preferences, and navigate complex health needs—delivering high-quality outpatient palliative care beyond hospice to ensure **more quality days at home.**

Reduce avoidable healthcare costs and enhance quality measures

Palliative Care: A High-Impact Solution

Palliative care is a medical specialty that provides symptom relief, comfort, and support for people with serious illness—reducing hospital visits, supporting timely hospice decisions, and improving quality of life for patients and caregivers.

Patients with life-limiting illnesses, like metastatic cancer, often continue curative or disease-modifying treatments but lack access to palliative care—especially in rural and underserved areas. Vynca's hybrid model bridges this gap.

A Hybrid Care Model Delivering Measurable Outcomes

Vynca delivers comprehensive at-home palliative care through an employed interdisciplinary team, blending in-home and virtual visits. Our care orchestration technology and clinical liaisons ensure seamless coordination with referring providers, while advanced analytics and remote monitoring enable early intervention to prevent hospitalizations.

LESS THAN
20%

Less than twenty percent of patients who qualify for palliative care have access to care.

Measurable Outcomes: Impact on Cost and Quality

Vynca delivers demonstrable savings and exceptional patient care.

Clinical Impact

- **81%** reduction in symptom burden after six weeks

Comprehensive Services Covered

Vynca offers full-spectrum outpatient palliative care, addressing medical, social, and emotional needs.

Clinical care

Symptom, pain, and medication management

Care coordination and social support

Navigation of resources, care, and health-related social needs

Mental health services

Counseling for patients and caregivers

Spiritual counseling

Addressing existential and end-of-life concerns

Advance care planning

Helping patients and families make informed care decisions

Technology-driven, value-based care, addressing the unique needs of each patient to provide more quality days at home.

Vynca's proprietary care technology leverages predictive AI, remote monitoring, and data analysis to anticipate patient needs and intervene early, reducing avoidable acute care utilization and enhancing patient outcomes while optimizing care delivery. Our data is shared with our health plan partners to facilitate collaboration on care delivery and ensure patients have the resources to navigate their care journey.

Let's Work Together to Improve Care and Reduce Costs

Vynca partners with health plans through a **value-based care model** to deliver cost-effective, high-quality care that keeps members at home and improves quality of life.

[1] Vynca study of dual-eligible and managed Medicaid patients predicted to have 12 months or less to live. The reduction was observed within three months of enrollment into our palliative care program
